

I can find a GDPR breach on your website in **60 seconds.**

No paid tools. No budget. Just the inspector your browser already ships with — the same one a regulator or a competitor would use.

Don't touch the cookie banner.

Open DevTools → **Network** → reload. Everything that loads **before** you click "Accept" loaded **without consent**. A tracker sitting in that list is a §25 TTDSG violation — full stop.

● ● ● Network — loaded before consent

www.google-analytics.com	200 · fired
connect.facebook.net	200 · fired
consentbanner.js	still open

↳ tracking started before the visitor agreed to anything.

A German server can still be a US problem.

Add the **Remote Address** column, drop the IP into **ip-api.com**. US-owned host? That's an Art. 44 transfer — even if the box sits in Frankfurt. The CLOUD Act doesn't care about geography.

● ● ● ip-api.com — lookup

35.241.3.184 → Google LLC

US

city → Kansas City

—

Art. 44 GDPR · third-country transfer

The font that costs €100 per visitor.

Filter Network by **"font"**. See **fonts.gstatic.com**? Every visitor's IP is shipped to Google on load. Munich court, 2022: €100 in damages. The fix is one line of code — host the font locally.

● ● ● Network — filter: font

fonts.googleapis.com/css 200 · US

fonts.gstatic.com/...woff2 200 · US

LG München I · 3 0 17493/20 · 20.01.2022

You don't need cryptography. You need one grade.

Paste the domain into **ssllabs.com**. Read the letter at the top. Below an A, flag it to IT. That's the entire check — skip the 30 pages of TLS theory.

SSL Labs – server test

Overall rating

B

supports TLS 1.0 / 1.1

capped

↳ below A → escalate to the technical contact.

Most privacy people
can cite Schrems II.

Few can point to
the IP address.

The gap in this field isn't legal knowledge. It's lawyers who can open the inspector, **show** the violation, then write the clause that fixes it. That overlap is rare — and it's where I work.

TRY IT YOURSELF

Be ahead of 70% by Friday.

Audit **one** real website. Screenshot the tracker that fired pre-consent, the US IP, the Google Fonts call, the TLS grade. One page. One sentence of law per finding.

That single artifact beats six months of reading — because almost everyone studies these violations, and almost no one has actually produced the evidence.

IF YOU'RE HIRING IN THIS SPACE

Nidhi Kalyani

Lawyer → data protection & AI governance · Berlin

GDPR operations · EU AI Act readiness · ISO 27701 ·
CIPP/E & AIGP in progress. I bridge the legal text and the
Network tab.
